HOW ARE PRODUCTS APPROVED FOR EPA'S LIST N?

EPA allows several types of claims to be used to combat COVID-19:

The screenshot shows the EPA website header with the logo and search bar. Below the navigation bar, it says 'Related Topics: Coronavirus'. The main heading is 'How does EPA know that the products on List N work on SARS-CoV-2?'. Below this, it states 'EPA expects the products on List N to kill SARS-CoV-2 (COVID-19) because they:' followed by three bullet points:

- Demonstrate efficacy against SARS-CoV-2 (COVID-19);
- Demonstrate efficacy against a virus that is harder to kill than SARS-CoV-2 (COVID-19); or
- Demonstrate efficacy against another type of human coronavirus similar to SARS-CoV-2 (COVID-19).

At the bottom of the screenshot, a red text box states: 'EPA expects all products on List N to be effective against SARS-CoV-2 when used according to label directions.' Three arrows point from the explanatory text on the right to the three bullet points.

Direct claim against SARS-CoV-2

A virus listed in the Emerging Viral Pathogen claim such as Norovirus, Adenovirus, Rotavirus, Canine Parvovirus, etc.

Human coronavirus claim

EPA's List N only lists one option per product, though all three options meet the criteria to be included on List N
